

COSS MANUFACTURING SUCCESS : AUTOMOTIVE

The automotive sector is one of the world's truly Global Manufacturing sectors.

Original Equipment Manufacturers and the myriad suppliers that make up the automotive supply chain not only market to customers around the globe, but also manufacture locally, using capital-intensive, automated production facilities.

Management attention is ever-focused on slashing costs to stay viable, with extreme pressure on suppliers to deliver better products closer to production time. While North American suppliers look to moving operations to China, India and Mexico, chasing lower labor costs around the globe is not a long-term solution. The goal must be to eliminate non-value-added costs through streamlined and common business processes.

COSS Manufacturing software provides a proven solution in the quest to successfully control costs.

COSS Manufacturing software, operational at numerous small and mid-sized manufacturers in the Automotive sector, provides real-time tracking and control over costs. Users can identify, track and monitor costs throughout the production process while making the information instantly available to all in high quality reports. Fully integrated with financial software, it ensures that data need only be captured a single time.

Further full integration with CAD software enables manufacturers to review and visually monitor each part in the production process. The Scheduling Module delivers control of product scheduling and scrutinizes activity for each job, while information is easily retrieved at the desktop, and available EDI links further integrate the customer-supplier link.

If you'd like more information about COSS Systems and discover how COSS Manufacturing software can help your business, please contact us. We'd be happy to share with you our experience in the Automotive industry.

And let you focus on success.
